

# Mixing Solutions for the **Cosmetics** Industry

As a result of decades of experience in the field of mixing technology, MAP® offers specifically developed solutions for the Cosmetics Industry.

The company's wide product range provides a suitable mixer for virtually every application. Trustful cooperation with leading international companies has greatly contributed to the definition of a specific quality standard for this industry.

The range includes single-shaft ploughshare and shovel-tool mixers, ribbon blenders, twin-shaft ribbon or paddle mixers as batch-type or continuous mixers for large scale production, as well as particularly versatile laboratory mixing equipment.

MAP® mixers are not only innovative but also attractively priced, tailored to the specific needs of customers in the Cosmetics Industry.

MAP® is a member of WAMGROUP® - global leader in bulk solids handling and processing equipment.

## Benefits

- Short mixing and discharging time
- High mixing homogeneity: 1/100,000
- Tack-free chamber liner
- High homogeneity and reproducibility of batches
- Easy-to-clean version
- Minimum residue
- ATEX versions available
- Robust design ensuring low maintenance and extended durability

Tack-free liner, large inspection door and easy to clean interior

Liquid injectors and choppers

304L / 316L stainless steel chamber internally polished (externally on request)

Choppers, liquid injectors and temperature jacket

### Main Applications

- Detergents
- Soap
- Toothpaste
- Flavours
- Pigments
- Face powder
- Additives
- Cosmetics processing
- Beauty creams
- Plant extract

## Expertise – Skills – Know-how

Extensive testing in MAP®-owned laboratories all over the world and vast field applications are the foundation of specific process competence gained on the job. MAP®'s solutions for the Cosmetics Industry ensure durability of mixing vessels and tools, compliance with international food-grade and hygiene standards, as well as professional after-sales service.

MAP® is the ideal choice to match market needs in terms of quality, price, maintenance, safety and environmental protection. All MAP® machines are produced from tried and tested standard components.

The main focus of MAP® is on offering industrially manufactured top quality products at an attractive price.

WAMGROUP®'s worldwide sales and service network guarantees professional and competent advice on the spot, as well as smooth order management and prompt spare parts supply.

### Decades of experience

Profound knowledge of the Cosmetics Industry enables MAP® to identify the most suitable solution for virtually any application.

### In-house development and manufacturing

All our products are developed, tested, manufactured and installed by our own staff. Our aim is to provide comprehensive assurance in terms of quality and delivery time.

### Skills and competence

Laboratory tests prior to industrial production processes are a guarantee for optimum results.

### Committed to problem solving

We are committed to provide product specialisations, accessories, options and specific process know-how that ensure solutions tailored to the user's needs.

### Our customers are our partners

We consider our customers as our partners. Teaming up with our clients in problem solving is crucial to MAP®.

### Global service network

WAMGROUP®'s global distribution network offers every MAP® customer professional advice, smooth order management and a 'round the clock' spares service.
